

GEN AI FOR SMARTER BUSINESS INSIGHTS

LEXI Insights

The first in the LEXI AI suite, LEXI Insights integrates AI models within the LEXI Library platform, enabling users to generate novel outcomes from LEXI output and related data. Designed to help surface patterns, review content, and generate unique insights grounded in the data behind them, this lightweight proof of concept is provided for user evaluation and feedback that will directly inform future product design and development.

✓ Existing Data, Extended Value

Leverage existing real-time outputs (events, meetings, broadcasts) by layering analysis and context, without re-architecting upstream systems.

✓ Insights In Minutes

Analyze real-time transcription alongside related data sources (e.g., social, chat) while the event is still unfolding.

✓ Ask Questions in Plain Language

Query multiple data sources at once using LLM-powered analysis, without pre-built dashboards or schemas

✓ Built for Sensitive Data

Single-tenant cloud deployment ensures data isolation and control.

✓ Trace -> Trust

LLM outputs are directly linked to the underlying content that supports them, enabling validation, auditability, and confidence in AI-assisted analysis.

✓ Single Signals to Big Pictures

Consolidate multiple real-time and static data streams into a single analytic view, revealing patterns from isolated sources.

✓ Future-Proof AI architecture

AI Model-agnostic architecture allows you to adopt best-in-class models as performance, cost, and policy landscapes change.

How It Works

Integrate

Connect your proprietary data with LEXI AI.

Scale

Expand effortlessly as your business grows.

Unlock Potential

Maximize efficiency with LEXI AI.

Generate Insights

AI-driven analysis & real-time predictions.

Automate

Streamline workflows and decision-making with automated insights.

Enhance your business operations with LEXI AI.
